

# Indicators for in-home advanced care

Working in collaboration with you, the physician, in-home advanced care offers quality care for patients who are unable to visit the doctor's office – in the comfort and familiarity of their home or facility. We provide a “home visit” service for patients with limited mobility – to provide reassurance and reduce hospital readmissions.

Our team of nurse practitioners provides personalized care for your homebound or home-limited patients – delivering the peace of mind that comes with a home visit.

Home visits help integrate and coordinate the steps in a patient's transition from the hospital, their recovery from an illness, or in the phase between being homebound and recovering mobility. We will help meet their healthcare needs until they are able to return to your office.

You provide quality care in your practice. Our nurse practitioners want to work with you to help continue and expand that care.

## **In-home advanced care may be indicated if your patient:**

- Is home-limited/homebound
- Has limited resources, support, and/or transportation
- Has co-morbidities or need for chronic disease management

If the answer is “yes” to any of the above indicators, the patient may be a candidate for an in-home advanced care evaluation.
