

How do I talk to my patient about in-home advanced care?

In-home advanced care provides your patients with added safety, education, and early identification of possible complications following a hospital discharge and/or during a homebound period. We provide a “home visit” service for patients with limited mobility – to provide reassurance and avoid hospital readmissions.

Working in collaboration with you, their physician, we offer the same quality care for patients who are unable to visit the doctor’s office – in the comfort and familiarity of their home or facility. Our post-hospitalization visits help seamlessly transition patients from hospital to home, and provide care as they recover or manage their condition.

From general primary care to chronic and acute illnesses, in-home advanced care is an effective solution for homebound or home-limited patients who have difficulty traveling. We will help meet their healthcare needs until they are able to return to your office.

You provide quality care in your practice. Our nurse practitioners want to work with you to help continue and expand that care.

Our services include:

- Primary care
- In-home lab services/X-rays
- Post-hospitalization visits
- Wound care visits
- Medication management
