

# Why consider long-term acute care for patients?

Long-term acute care facilities specialize in treating medically complex needs and conditions. You can trust that we will develop a comprehensive treatment plan designed for your patient's specific needs.

Qualified staff will perform a pre-screening evaluation and on-site assessments may be performed. Preadmission team conferences can be arranged to discuss patient and family goals. If necessary, transportation will be arranged by the hospital.

An interdisciplinary team of professionals meets regularly to formulate, review and update each patient's individualized plan of care. We include the family in the plan of care to meet the goals and expectations of the patient and the family.

We also provide a comprehensive discharge plan to ensure care is delivered appropriately after the patient leaves our hospital.

Types of services we provide:

- Telemetry/cardiac monitoring
- Respiratory therapy
- Ventilator management and weaning
- Antibiotic therapy
- Wound care, including the use of negative pressure wound therapy
- Hyperbarics
- Nutritional assessment and support
- Case management
- Discharge planning
- Patient education
- Therapy services (physical therapy, occupational therapy, speech therapy)
